

Government Logistics & Supply Chain Procurement Tender

Document ID: TENDER-LOG-SUPPLY-091 | Version: 3.1 | Date: May 2026 | Author: Department of Supply & Infrastructure

Section 1: General Procurement Details

The Department of Supply & Infrastructure is soliciting competitive proposals for the integration of autonomous logistic networks and tokenized supply routing pipelines.

Proposals must detail full system architecture, low-latency cognitive orchestration schemes, and compliance with the Federal Safety Protocol for autonomous agents.

Section 2: Technical Specifications & SLA Matrix

Bidders must demonstrate adherence to the minimum performance metrics specified in the table below. Systems that do not meet these parameters will be disqualified without further evaluation.

Section 3: SLA Metrics & Performance Monitoring

Performance metrics will be monitored continuously via automated compliance agents. Uptime statistics and audit logs must be exposed to government auditors via a read-only secure API endpoint.

Section 4: Penalties for Integration Delays

Integration delays beyond the scheduled 30-day sandbox testing period will incur liquid damages of \$10,000 USD per business day, capped at 15% of the total procurement contract value.

Requirement ID	Technical Parameter	Minimum Acceptable SLA
REQ-001	Maximum Agent Latency	< 250ms under peak load
REQ-002	Daily Transaction Volume	50,000,000 processed tokens
REQ-003	Encryption Standard	AES-GCM-256 + TLS 1.3
REQ-004	Uptime Guarantee	99.99% overall availability
